

AI Platform Product Manager

HOME ASSIGNMENT

Background

HiBob is a global HR platform supporting the employee lifecycle across onboarding, performance, learning, payroll, compensation, and other areas.

HiBob's AI Group is responsible for helping evolve Bob into an AI-first product and enabling product teams across the company to build valuable, trustworthy agentic experiences.

We believe AI could improve how newly hired employees are onboarded into their employer's organization. This refers to an employee joining and becoming productive within a HiBob customer's company - not to a customer implementing or learning to use the Bob platform.

Employee onboarding spans multiple stages, users, and areas of Bob. The relevant product experiences, workflows, and data are owned by different HiBob teams. Any meaningful solution will therefore require contribution and collaboration across the product organization.

The challenge

Assume you are the Product Manager responsible for HiBob's AI Platform.

Recommend how HiBob should approach the opportunity to create an AI-powered experience that supports a newly hired employee during their onboarding into their organization.

We are interested in both the value that could be delivered through this onboarding experience and what HiBob may need to make this and future AI experiences successful.

Your proposal should include a clear recommendation for an initial product direction and how you would move it forward.

You may interpret the opportunity broadly and make reasonable assumptions. Please make the most important assumptions visible.

Deliverable

Present your recommendation in the format you believe communicates it most effectively.

Please keep the submission concise - approximately 10 slides or pages at most - and spend no more than four hours on it.

Following our review of the submitted assignment, selected candidates will be invited to present their proposal to the team. The discussion will focus on your reasoning, decisions, assumptions, and how you would adapt your approach as you learn more.

Good luck!

The HiBob Product Team
